[BAC] PROBABILITÉS CONDITIONNELLES

1) Arbre pondéré représentant la situation :

2)
$$p(A \cap Z) = p(A) \times p_A(Z) = 0.2 \times 0.8 = 0.16$$
.

3)
$$p(Z) = p(A \cap Z) + p(B \cap Z) + p(C \cap Z) = 0.16 + p(B) \times p_B(Z) + p(C) \times p_C(Z)$$

$$\Rightarrow p(Z) = 0.16 + 0.45 \times 0.3 + 0.35 \times \frac{5}{7} = 0.16 + 0.135 + 0.25 = 0.545.$$

4)
$$p_Z(C) = \frac{p(C \cap Z)}{p(Z)} = \frac{0.25}{0.545} = \frac{50}{109}$$
.
